

FNP Sales Analysis — Executive Summary

Excel / Power Pivot Interactive Dashboard | Order Period: Mar–Dec 2023

1,000 Total Orders Placed	Rs 35,20,984 Total Revenue	5.53 days Avg. Order-to-Delivery Time	Rs 3,520.98 Avg. Revenue per Customer
-------------------------------------	--------------------------------------	---	---

Overview

This dashboard was built to analyze one year of e-commerce gifting sales data for FNP (Ferns N Petals) — a flowers, cakes and gifting brand. It consolidates 1,000 orders across occasions, product categories, cities and time periods into a single interactive Excel report, with slicers for Occasion, Order Date and Delivery Date to enable self-serve drill-down analysis.

Key Insights

- **Seasonal demand is highly concentrated:** August alone drove roughly double the revenue of any other month (~Rs 7.5L), with a secondary spike in November — indicating strong festive/occasion-led buying patterns rather than steady month-on-month demand.
- **Raksha Bandhan and Anniversary are the top revenue-generating occasions**, together contributing over 30% of total revenue, ahead of Birthday, Holi and Diwali.
- **Sweets, Colors and Soft Toys are the leading product categories**, each generating over Rs 6.5L in revenue, while Mugs and Plants remain long-tail, lower-volume categories.
- **Order volume is geographically spread across tier-2/tier-3 cities**, with Imphal, Hardwar and Kavali leading the top-10 cities by order count — suggesting demand beyond metro markets.
- **The 'Magnum Set' and 'Dolores Gift' are the best-selling SKUs**, each contributing over Rs 1L in revenue among the top 5 products.
- **Order-to-delivery time averages 5.53 days**, a useful operational benchmark for logistics and customer-experience tracking.
- **Revenue by hour-of-day is volatile with no single dominant peak**, pointing to a broad, all-day ordering pattern rather than concentrated 'shopping hours'.

Tools & Techniques

Built in Microsoft Excel using Pivot Tables, Pivot Charts, and interactive Slicers/Timelines for Order Date, Delivery Date and Occasion. Applied DAX-style aggregation logic (SUM, AVERAGE, COUNT) and custom KPI cards for at-a-glance metrics, along with layout/dashboard design principles (single-screen view, consistent color theme, currency and date formatting).
